— INNOVATION MEETS RESPONSIBILITY —

For A Greener And
More Resilient Future

RMD-RENOV8 JOINED HANDS!

RMD Boards, a leading GenNext building and construction materials manufacturing company has its mission to conserve our world by facilitating easy access to sustainable products, in partnership with **Renov8**, a leading industrial recycling solutions provider.

All, with environment consciousness and global ambition at the pivot - to build a greener world for the next generation and a huge step forward towards a Sustainable and green world.

WHY THE WORLD NEED US NOW?

The Cause

The world is moving forward, with 230 billion m² of infrastructure projected to be built by 2060. But many of the building materials used today have an impact on the planet. The right product can help lower emissions and reduce waste – that's why we want to contribute with more sustainable solutions.

The Pillars of our Ambition

Three words are the foundation of everything we do: Circularity, Renewability and Recreating Value at the end. By creating what we do around these values, we ensure that everything that comes from RMD Boards deliver value to both people and the planet.

CIRCULARITY

True circularity is to go all the way around. Our program is active in many markets, contributing to reuse and recycling.

RENEWABILITY

Renewable materials are an important part of a fully circular future. Our products are 100% regrindable materials and further applicable for recycling.

RECREATING VALUE AT THE END

To lay the foundation for a better future, we do that by continuously improving our modular offerings and finding the way to recycle them at their end of life & working with local recycling schemes.

WHY WE ARE UNIQUE?

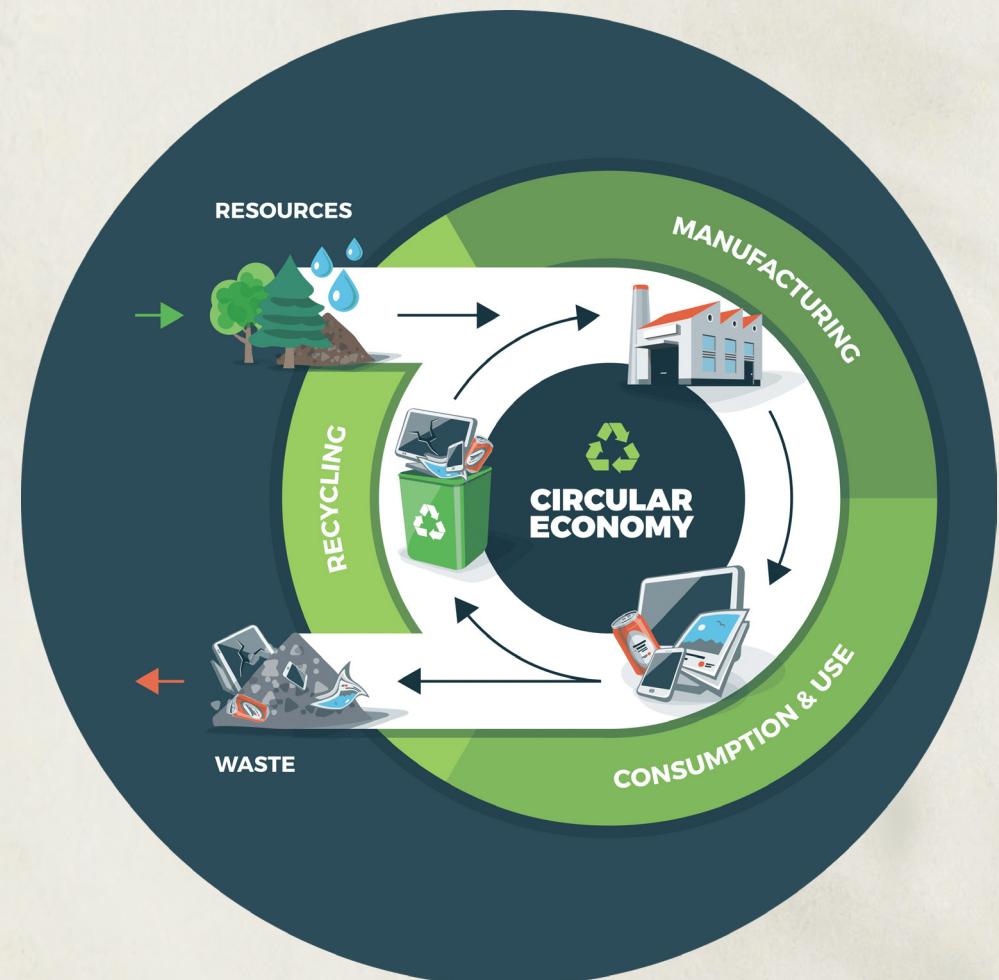

Product Design With Circularity And Users In Mind

We develop and design wall cladding, ceiling and industrial solutions to create value during use and after, keeping both the environment and users in mind. Our focus is mainly on designing the products with renewable and recycled materials.

We aim to create eco-and human-safe product categories while contributing to recycling schemes worldwide.

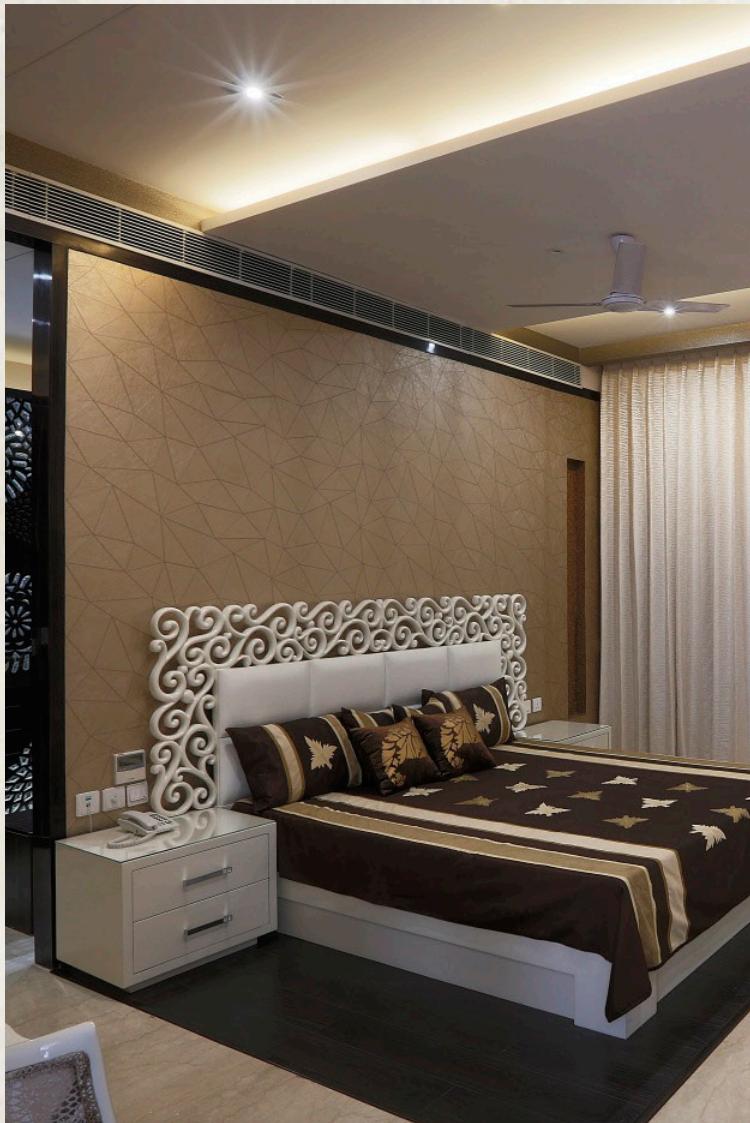

Circular Economy Building Materials Manufacturing

In our circular economy approach, we collect existing building materials waste from resources and reinvest them with replaceable components, assuring a capacity for repeated recycling and reuse.

COLLECTING POST CONSUMER WASTE

THE ULTIMATE BENEFITS

Eco-Friendly

Our Sustainable wall lading, ceilings, and Industrial Solutions made from recycled or renewable materials are Eco-friendly.

Reduced Environmental Impact

Our Sustainable materials contribute to energy efficiency and waste reduction in the construction industry.

Improved Indoor Air Quality

Our Sustainable materials minimize the release of harmful pollutants, creating healthier living and working spaces.

INCREASING USAGE OF RENEWABLE MATERIALS

To create truly sustainable products, we need to make sure the materials we use and how we source them allow us to give more back to nature than we take. That is why we are increasing the use of sustainable, recycled and renewable raw materials

**Controlled Supply
Chain Certification**

**Traceable
Raw Materials**

**Natural
Raw Materials**

**Recycled
Materials**

**Ethical and
Sustainable Sourcing**

RECREATING VALUE AT THE END

We design our panels with the end in mind from the beginning to make sure they can still create value through recyclability when they reach their end of life.

CHALLENGES & SOLUTIONS

Industry Resistance

Widespread adoption of sustainable building materials still in early stage as most of the companies resist to produce.

Cost Considerations

There is a misconception that sustainable products are expensive but most of the products come under affordability.

Awareness & Implementation

Highlighting the need for the mass people and consumers about the benefits and availability of sustainable materials.

OUR JOURNEY TOWARDS SUSTAINABLE WALL CLADDING CONTINUES

The world urgently needs to change to avert the climate crisis, and we need more sustainable materials to support this transition.

We are already contributing, but we know we still have a long way ahead of us if we want to truly go around: To be prepared for the future, we need to do all that we can today. With our ambition and initiatives such as our 2025 Sustainability Program indicating we are making good progress. From reducing our carbon footprint and increasing our use of renewable energy to reducing waste output and enabling a sustainable supply chain management.

With the 100% recycled solutions we offer today and our expanding Fast wall cladding concept, combined with our use of safe and traceable raw materials, we are well on our

way contributing to a circular economy. But our journey towards becoming the trusted partner for fully circular wall cladding solutions made with 100% recycled material is far, from over. We will continue to be 'guided by our three key values: Circularity, Renewability, and Recreating Value at the End. With these as the foundation of everything we do, we can ensure that we continue to deliver value to both people and the planet.

We were among the first in the industry to live up to the highest standards within environmental product declarations and we will continue to lead the way forward.

BACK TO
THE WALL

We invite you to join us as we accelerate our progress towards more sustainable wall cladding.

To set a clear direction and meet our over all ambition and the themes it build on, we've established our 2025 sustainability program to guide our process moving forward.
